PROFESSIONAL SUMMARY

Results-driven, product-minded professional with a strong foundation in Product Analytics, Product Operations, and cross-functional execution. Proven track record at Carnot Technologies (Mahindra Group) of driving product validation, translating user feedback into technical requirements, and building scalable product monitoring systems. Adept at leveraging SQL, PostgreSQL, Metabase, and Hex to deliver data-driven product insights and optimize business workflows. Passionate about solving user-centric problems, conducting product testing, and supporting the end-to-end product lifecycle through structured problem-solving and stakeholder collaboration.

TECHNICAL SKILLS

- **Product Management & Operations:** Product Operations, Product Analytics, Product Validation, User Feedback Analysis, Go-To-Market (GTM) Support, Cross-functional Collaboration, Stakeholder Management
- **Data Analytics & Business Intelligence:** PostgreSQL, SQL, Python, Metabase, Hex, Dashboarding, KPI Tracking, Product Monitoring, Data-driven Decision Making, Reporting Systems
- **Technical Domain & Integrations:** API & System Integrations, Workflow Automation, Systems Thinking, Hardware-Software Integration, Structured Problem Solving
- **Languages:** English, Hindi, Marathi

PROFESSIONAL EXPERIENCE

Carnot Technologies (Mahindra Group)
Hardware Operations Engineer & Data Analyst

Mumbai, Maharashtra
July 2025 – Present

- **Product Analytics & Performance Monitoring:** Developed product and operational reporting systems (PostgreSQL, Metabase, Hex) to improve visibility into key business metrics and support data-driven decision-making. Performed large-scale data analysis to uncover operational inefficiencies, optimizing SIM utilization and reducing monthly recurring costs by 25-30% (saving Rs. 1.5-2 Lakhs/month).
- **User Feedback & Feature Requirements:** Led on-site technical product integrations for major B2B enterprise clients. Translated direct user feedback and operational bottlenecks into actionable technical requirements, accelerating the product development cycle and ensuring seamless system functionality.
- **Product Validation & Workflow Testing:** Conducted product validation and workflow testing for internal business applications, including a secure diagnostic interface for the Carnot Dealer App. Partnered with software engineering teams to identify system defects, providing structured product feedback to enhance usability and operational effectiveness.
- **Go-To-Market Support & Process Optimization:** Supported the Go-To-Market (GTM) execution and product launch for a Solar GPS Tracker. Developed structured evaluation frameworks to optimize vendor integrations and supply chain workflows, successfully reducing manufacturing costs by 30-35% through data-driven problem solving.
- **Product Operations & Workflow Automation:** Designed and deployed automated product operations workflows using n8n, Google Apps Script, and API integrations to eliminate manual reporting. Built custom data pipelines to extract operational product metrics, delivering real-time business intelligence and execution visibility to cross-functional leaders.

ACADEMIC PROJECTS

AI-Powered Secure Access System (Python/ML)

- Identified user security needs to design and build an AI-driven multi-factor access control product, integrating Python-based facial recognition with biometric authentication to solve logical access challenges.
- Managed product execution from concept to hardware-software API integration, demonstrating strong systems thinking to establish a highly reliable, automated security mechanism.
- Conducted rigorous product validation and rapid prototyping, iterating on system accuracy and execution latency based on testing feedback to deliver a practical, user-centric solution.

Tilt Angle Measurement System (Embedded Integration)

- Drove the end-to-end product design of a high-precision measurement solution, focusing on solving specific hardware validation and data-collection use cases.
- Developed and optimized backend firmware in Embedded C, executing sensor calibration to ensure the product delivered structured, accurate data pipelines for downstream monitoring systems.
- Applied practical problem-solving to overcome integration challenges, successfully taking full ownership from initial concept to a validated, functional prototype.

EDUCATION

- **Bachelor of Engineering - Electronics & Telecommunication** | Don Bosco Institute of Technology, Mumbai | 2022 – 2025
- **Diploma - Electronics & Telecommunication** | Thakur Polytechnic, Mumbai | 2019 – 2022

CERTIFICATIONS

- **Data Analytics & Visualization Workshop (OfficeMaster):** Hands-on training in data modeling, advanced visualization techniques, and interactive product dashboard creation.
- **Cybersecurity Assessment Certification:** Covered network security principles, threat analysis, and foundational cybersecurity compliance.
